## The National Candle Association Announces New Opportunities for Membership

A new Incubator category has been created for manufacturers and suppliers with an annual sales volume of less than \$750,000.

[GDA Staff](#), October 22, 2018

WASHINGTON D.C. – **The National Candle Association (NCA)** introduced its revamped membership dues structure, designed to encourage smaller candle manufacturers and suppliers to become involved in the official trade organization for the US candle industry. Representing U.S. candle manufacturers and their suppliers, NCA serves as an industry leader in fire safety, technical and scientific expertise, regulatory matters and trade issues.

NCA has added a new Incubator category for candle manufacturers and suppliers to the industry generating annual sales volume of less than \$750,000. Additionally, current member dues for candle manufacturers and suppliers generating less than \$5.0 million annually will be further segmented. Annual dues have also been lowered for companies with annual sales less than \$2.5 million. **Details are available on at the National Candle Association online.**

- ▶ Along with offering a series of networking and professional development opportunities, the association monitors trade issues impacting the industry. Recently, through oral and written testimony to the U.S. Trade Representative, NCA successfully influenced the removal of waxes used in candle production from being subjected to 25 percent tariffs under Section 301. NCA has additionally submitted comments challenging the US Customs & Border Protection's proposed reclassification of imported glassware, emphasizing the

potential negative economic impact on US  
candle manufacturers.

Headquartered in Washington, D.C., NCA  
has more than 100 candle manufacturers and suppliers as members, and is  
recognized as the leading authority on candle manufacturing, science and safety. For  
more information on becoming an NCA member, please visit [candles.org](http://candles.org).
